

## End-To-End ERP & POS Implementation For Mobile Retail Store

Client is a multi-location retail business for mobile phone requiring a unified ERP system to manage operations from procurement to sales, POS, payments, warehousing, and accounting.

# Business Challenges

- 01 Disconnected systems for purchasing, sales, and accounting
- 02 Manual inventory reconciliation
- 03 Limited real-time visibility into stock and finances
- 04 Complex payment handling including split and finance payments
- 05 Difficulty generating accurate financial statements

## Solution Overview

An end-to-end ERP system was implemented covering buying, inventory, warehousing, POS, payments, accounting, and financial reporting in a single integrated platform.

## Key Modules Implemented

-  **Procurement & Buying** : Vendor management, purchase orders, and stock inward
-  **Inventory & Warehouse Management**: Real-time stock tracking across warehouses
-  **POS System** : Barcode-based billing with real-time stock updates
-  **Payment Integrations**: Paytm, Pine Labs, split payments, and finance options
-  **Sales & Billing** : Automated invoicing with tax compliance
-  **Accounting** : Automated ledger postings and reconciliations
-  **Financial Reports** : Balance Sheet, P&L, inventory and payment reports

# Technology & Architecture

The system was built using a scalable ERP framework with role-based access and optimized performance for high-volume retail transactions.

## Business Impact

## Conclusion

The implementation digitally transformed Client by streamlining operations, enhancing payment flexibility, and providing accurate financial insights.
